Airbnb Cleaning Automation System

Automated cleaner dispatch, real-time communication, and complete job tracking — all on autopilot.

PREPARED FOR NICOLAS MORA

Joe's Tech Solutions · System Overview · March 2026

1 How It Works

Your cleaning automation runs 24/7 in the background. It watches your Airbnb calendar, automatically notifies your cleaner when a guest checks out, and keeps you updated on everything — without you lifting a finger.

1

📅 Calendar Monitoring

The system checks your Airbnb calendar every 30 minutes for upcoming checkouts. When a guest is checking out today or tomorrow, it automatically triggers the next step.

2

📲 Cleaner Gets Notified

Your cleaner receives a Telegram message with the property address, how long the guest stayed, and any special instructions. It's personalized and clear — no confusion.

3

💬 Two-Way Communication

Your cleaner replies directly in Telegram. The system understands their response automatically — whether they're done cleaning, reporting an issue, or asking a question.

4

🔔 Smart Routing

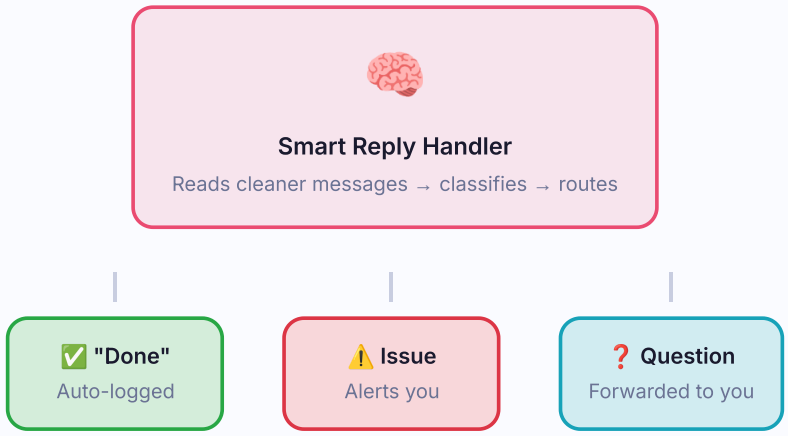
If the cleaner reports a maintenance issue or has a question, you get notified immediately. If they just say "done," it's logged automatically and you don't get bothered.

5

📊 Everything Tracked

Every booking, every dispatch, and every cleaner response is logged to a Google Sheet you can access anytime. Full history, full visibility, zero manual data entry.

2 System Architecture



💡 **You only get notified when it matters.** Routine completions are logged silently. Issues and questions are sent to you immediately.

3 Smart Message Handling

The system automatically understands what your cleaner means, so you never have to manually check in or chase updates.

CLEANER SAYS	SYSTEM ACTION	YOU SEE
"Done", "Finished", "All cleaned"	Auto-logged + sends thank you	Nothing (it's in your spreadsheet)
"There's a broken pipe", "Stain on carpet"	Alert sent + logged as maintenance	Immediate Telegram notification with details
"Where are the extra towels?"	Forwarded to you	Message forwarded to your Telegram
Anything else	Acknowledged + logged	Nothing (auto-acknowledged)

4 Why This Works

⏰

Fully Automated

No manual texts, no forgotten checkouts. The system handles it 24/7.

💬

Real-Time Updates

Know instantly when cleaning is done or if something needs attention.

📊

Full Paper Trail

Every booking, dispatch, and response logged in Google Sheets.

📈

Scales With You

Add more properties and cleaners without changing the price.

TURNO / MANUAL	YOUR SYSTEM

$8+

per property / month
+ manual texting + no customization

$10

flat / month — unlimited properties
fully automated + fully custom

5 Getting Started

Setup is simple. Here's everything we need from you to go live:

1. **Share Your Airbnb Calendar Link**
   Go to your Airbnb hosting dashboard → Calendar → Export Calendar. Copy the iCal link and send it to us. That's how we see your bookings.

2. **Your Cleaner Downloads Telegram**
   Telegram is a free messaging app (like WhatsApp). Your cleaner downloads it, and we connect them to the bot. Takes 2 minutes.

3. **Tell Us Your Property Details**
   Property address, cleaner's name, and any standing instructions (e.g., "always check patio furniture"). We configure it all for you.

4. **We Flip the Switch**
   Once everything is configured, the system goes live. Your next checkout will be handled automatically. You just sit back and watch it work.

> 🚀 **No software to install. No apps to learn. No setup fee.**
> Everything runs in the cloud. You interact through Telegram — an app you already know how to use.

🤝
